

**Adult ADHD Self-Report Scale (ASRS)**

The Symptom Checklist is an instrument consisting of the eighteen DSM-IV-TR criteria. Six of the eighteen questions were found to be the most predictive of symptoms consistent with ADHD. These six questions are the basis for the ASRS v1.1 Screener and are also Part A of the Symptom Checklist. Part B of the Symptom Checklist contains the remaining twelve questions.

	Tick one option per question only	Never	Rarely	Some times	Often	Very often
<b>A1</b>	How often do you have trouble wrapping up the final details of a project, once the challenging parts have been done?					
<b>A2</b>	How often do you have difficulty getting things in order when you have to do a task that requires organization?					
<b>A3</b>	How often do you have problems remembering appointments or obligations?					
<b>A4</b>	When you have a task that requires a lot of thought, how often do you avoid or delay getting started?					
<b>A5</b>	How often do you fidget or squirm with your hands or feet when you have to sit down for a long time?					
<b>A6</b>	How often do you feel overly active and compelled to do things, like you were driven by a motor?					
<b>B7</b>	How often do you make careless mistakes when you have to work on a boring or difficult project?					
<b>B8</b>	How often do you have difficulty keeping your attention when you are doing boring or repetitive work?					
<b>B9</b>	How often do you have difficulty concentrating on what people say to you, even when they are speaking to you directly?					
<b>B10</b>	How often do you misplace or have difficulty finding things at home or at work?					
<b>B11</b>	How often are you distracted by activity or noise around you?					
<b>B12</b>	How often do you leave your seat in meetings or other situations in which you are expected to remain seated?					
<b>B13</b>	How often do you feel restless or fidgety?					
<b>B14</b>	How often do you have difficulty unwinding and relaxing when you have time to yourself?					
<b>B15</b>	How often do you find yourself talking too much when you are in social situations?					

# National Neurodiversity Assessments

## Expert Multidisciplinary Diagnostic Services

<b>B16</b>	When you're in a conversation, how often do you find yourself finishing the sentences of the people you are talking to, before they can finish them themselves?					
<b>B17</b>	How often do you have difficulty waiting your turn in situations when turn taking is required?					
<b>B18</b>	How often do you interrupt others when they are busy?					

### Scoring guidance

Score Part A.

If four or more marks appear in the shaded boxes within Part A then the person has symptoms highly consistent with ADHD in adults and further investigation is warranted.

The frequency scores on Part B provide additional cues and can serve as further probes into the person's symptoms. Pay particular attention to marks appearing in the shaded boxes. The frequency-based response is more sensitive with certain questions. No total score or diagnostic likelihood is utilised for the twelve questions in Part B. It has been found that the six questions in Part A are the most predictive of ADHD and are best for use as a screening instrument.
